## Notes for this profile:

- All years shown are calendar years unless otherwise specified.
- Upper and lower 95% confidence intervals are shown throughout this document where available. In charts, these are displayed as shaded areas either side of trend lines, or as black error bars in bar charts. Confidence intervals show the range of possible values and a certainty that the true value falls within them.
- Definitions for the indicators shown are available in Appendix 1.

## Demographics

### Summary:

For the most recent time periods available, Falkirk West Locality had:

- A total population of **48,361** people, where **49%** were male, and **18%** were aged over 65.
- **20%** of people lived in the least deprived SIMD quintile, and **7%** lived in the most deprived quintile.

### Population

In 2018, the total population of Falkirk West locality was 48,361. The graph below shows the population distribution of the locality.

**Figure 1: Population breakdown in Falkirk West.**

Source: National Records Scotland

Figure 2 shows the historical population of Falkirk West, along with the NRS population projections. The population has been rising. The population in Falkirk West is estimated to increase by 2.2% from 2018 to 2025. *Please see the footnotes for more information on how the population projections were calculated<sup>1</sup>.*

**Figure 2: Population time trend and projection.**

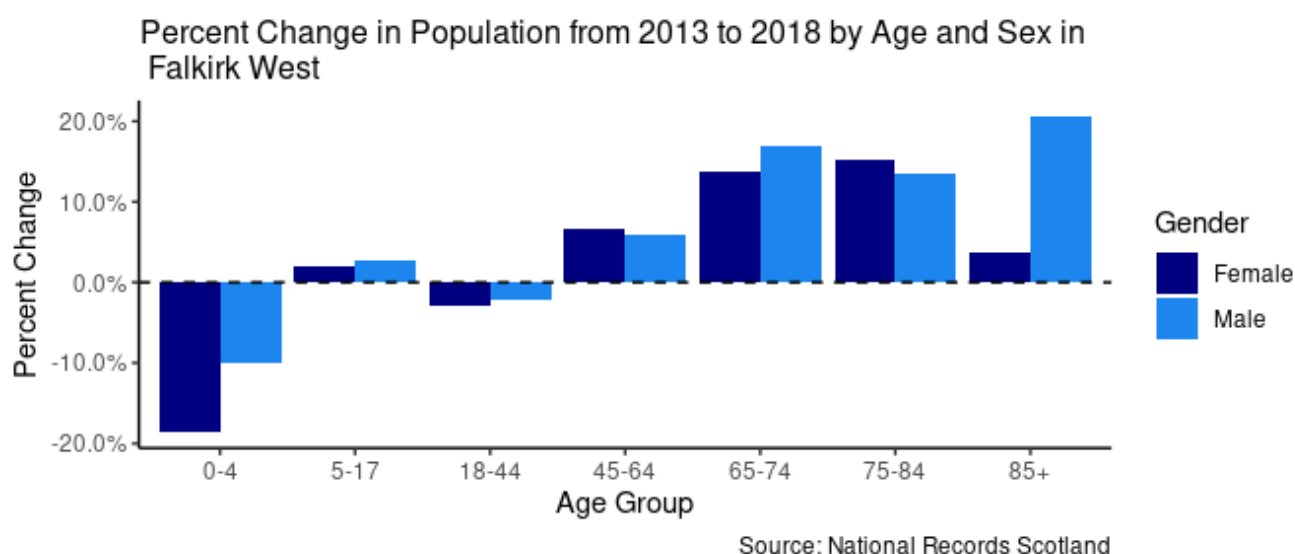

Source: National Records Scotland

Figure 3 shows how population structure has changed between 2013 and 2018.

**Figure 3: Change in population structure over the last five years.**

## Deprivation

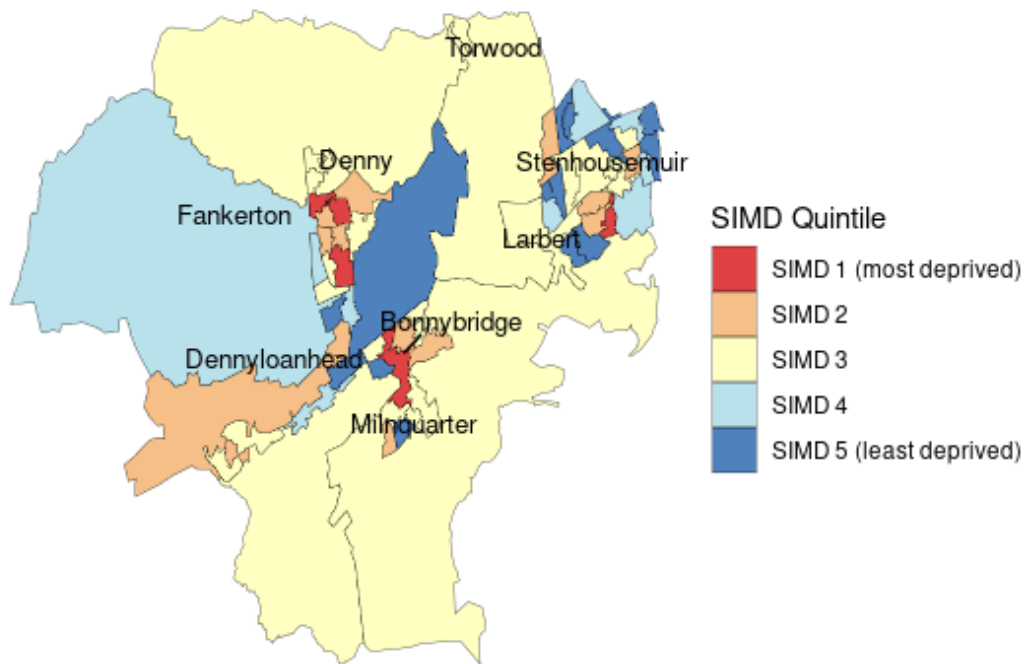

The following section explores the deprivation structure of Falkirk West through the Scottish Index of Multiple Deprivation (SIMD). The SIMD ranks all datazones in Scotland by a number of factors; Access, Crime, Education, Employment, Health, Housing and Income. Based on these ranks, each datazone is then given an overall deprivation rank, which is used to split datazones into Deprivation Quintiles (Quintile 1 being the most deprived, and Quintile 5 the least). The most recent SIMD ranking was carried out in 2020. This section mainly focuses on the SIMD 2020 classifications, however the 2016 classifications are used to assess how deprivation has changed in Falkirk West when compared to the rest of Scotland.

Of the 2018 population in Falkirk West, **7%** live in the most deprived SIMD Quintile, and **20%** live in the least deprived SIMD Quintile. The following table details the percent of the population living in the 2016 SIMD Quintiles, the percent living in the 2020 SIMD Quintiles, and their difference for comparison.

**Table 1: Percentage population living in the 2016 and 2020 SIMD Datazone Quintiles**

Quintile	Percent of Pop (2016)	Percent of Pop (2020)	Difference
SIMD 1	5.4%	7.0%	1.7%
SIMD 2	29.6%	21.7%	-7.9%
SIMD 3	24.5%	33.7%	9.2%
SIMD 4	17.9%	17.8%	-0.2%
SIMD 5	22.6%	19.9%	-2.8%

**Figure 4: Map of Data Zones within Falkirk West coloured by SIMD quintiles.**

Source: Scottish Government, Public Health Scotland

**Figure 5: Proportion of the population that reside in each 2020 SIMD quintile by domain.**

Source: Scottish Government, Public Health Scotland, National Records Scotland

**Figure 6: Percentage population living in the 2016 and the 2020 SIMD and Domain Quintiles**

Figure 6 presents a comparison between the 2016 Scottish Index of Multiple Deprivation figures, and the new 2020 SIMD figures. The percentages of the population living within each SIMD quintile and domain quintile were calculated first using the 2016 SIMD datazone classifications, and then the 2020 SIMD classifications. The differences in these percentages are plotted in Figure 6. Negative values on the y axis indicate a decrease in percent of the population living within a quintile, while positive values indicate an increase in percent of the population living within a quintile. **Please note that quintiles have been weighted by the Scottish population so, any local changes in SIMD quintile do not necessarily indicate a difference in deprivation, but rather a difference in deprivation in comparison to the rest of Scotland.**

**Difference in Percent of the Population Living In Deprivation Domain Quintiles  
SIMD 2016 Versus SIMD 2020 in Falkirk West**

## Households

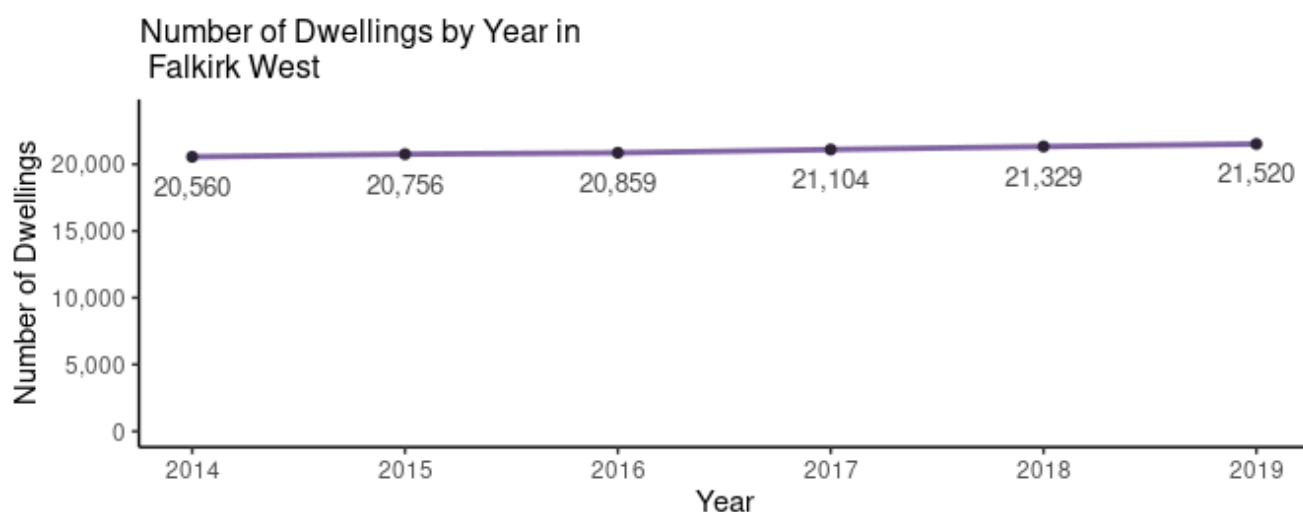

### Summary:

For the most recent time periods available, Falkirk West Locality had:

- **21,520** dwellings, of which: **98%** were occupied and **0.12%** were second homes.
- **34%** of dwellers received a single occupant council tax discount, and **1.1%** were exempt from council tax entirely.
- **57%** of houses were within council tax bands A to C, and **14%** were in bands F to H.

The graph below shows the number of dwellings in Falkirk West from 2014 to 2019.

**Figure 7: Number of dwellings time trend.**

Source: Council Tax billing system (via NRS)

Of the total number of dwellings in 2019, 34% (7,319 households) were occupied by an individual receiving a single occupant council tax discount. Furthermore, 1.1% (230 households) were occupied and exempt from council tax.

There were 25 dwellings classed as a second home in 2019, these dwellings made up 0.12% of the households in Falkirk West.

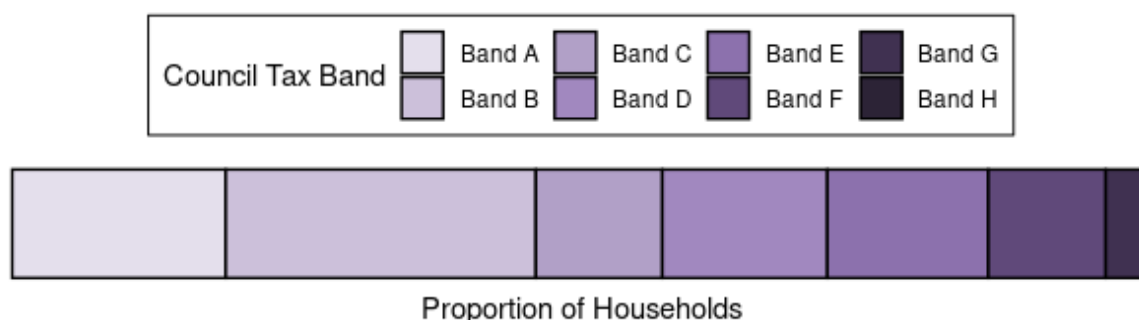

**Table 2: Breakdown of dwelling types by year for Falkirk West locality.**

Year	Total Dwellings	Occupied Dwellings	Vacant Dwellings	Single Occupant Tax Discount	Council Tax Exempt Dwellings	Second Homes
2014	20,560	20,022	443	6,813	194	93
2015	20,756	20,235	422	6,918	202	99
2016	20,859	20,407	413	7,041	193	39
2017	21,104	20,677	405	7,172	171	26
2018	21,329	20,907	397	7,181	203	25
2019	21,520	21,094	401	7,319	230	25

\*For further information please see NRS Small Area Statistics on Households and Dwellings

The proportion of households within each council tax band are displayed in the chart below, figures are shown in Table 3.

**Figure 8: Breakdown of households by council tax band for Falkirk West in 2019.**

A&E	Emergency Department	1
	Minor Injuries Unit	0
Care Home	Elderly Care	5
	Other	8

## General Health

### Summary:

For the most recent time periods available<sup>3</sup>, Falkirk West Locality had:

- An average life expectancy of **78** years for males and **80.8** years for females.
- A death rate for ages 15 to 44 of **99** deaths per 100,000 age-sex standardised population<sup>4</sup>.
- **18%** of the locality's population with at least one long-term physical health condition.
- A cancer registration rate of **641** registrations per 100,000 age-sex standardised population<sup>4</sup>
- **20%** of the population being prescribed medication for anxiety, depression, or psychosis.

### Life Expectancy

In the latest time period available from 2014-2018 (5 year aggregate), the average life expectancy in Falkirk West locality was **78** years old for men, and **80.8** years old for women. A time trend since 2008-2012 can be seen in figure 10.

Figure 10: Average life expectancy in men and women over time.

Source: ScotPHO

Table 5 provides the average life expectancy for men and women in different areas for the latest time period available. Please note that these are 5 year aggregates for the locality from 2014-2018, but 3 year aggregates from 2016-2018 at partnership, Health Board, and Scotland level.

**Table 5: Average life expectancy in years for the latest time periods (2014-2018 aggregated years for the locality; 2016-2018 aggregated years for other areas).**

	Locality	Partnership	Health Board	Scotland
	80.8	80.3	81.1	81.1
	78	77.1	77.5	77.1

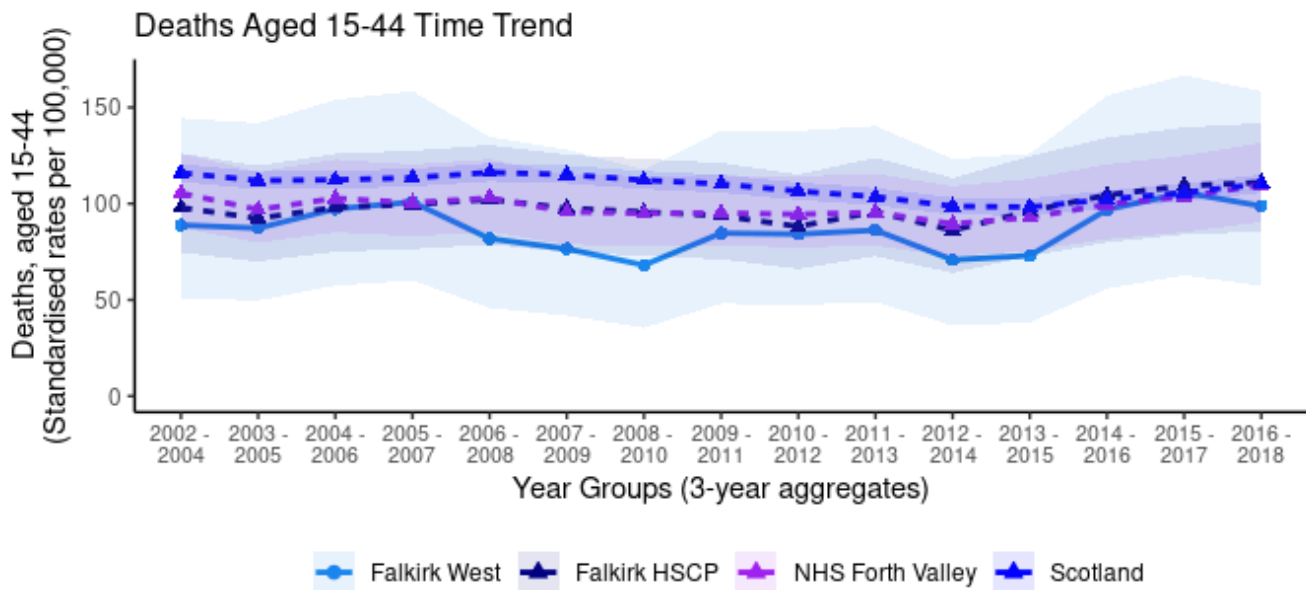

Where Locality = Falkirk West, Partnership = Falkirk HSCP, Health Board = NHS Forth Valley.

## Deaths, aged 15-44

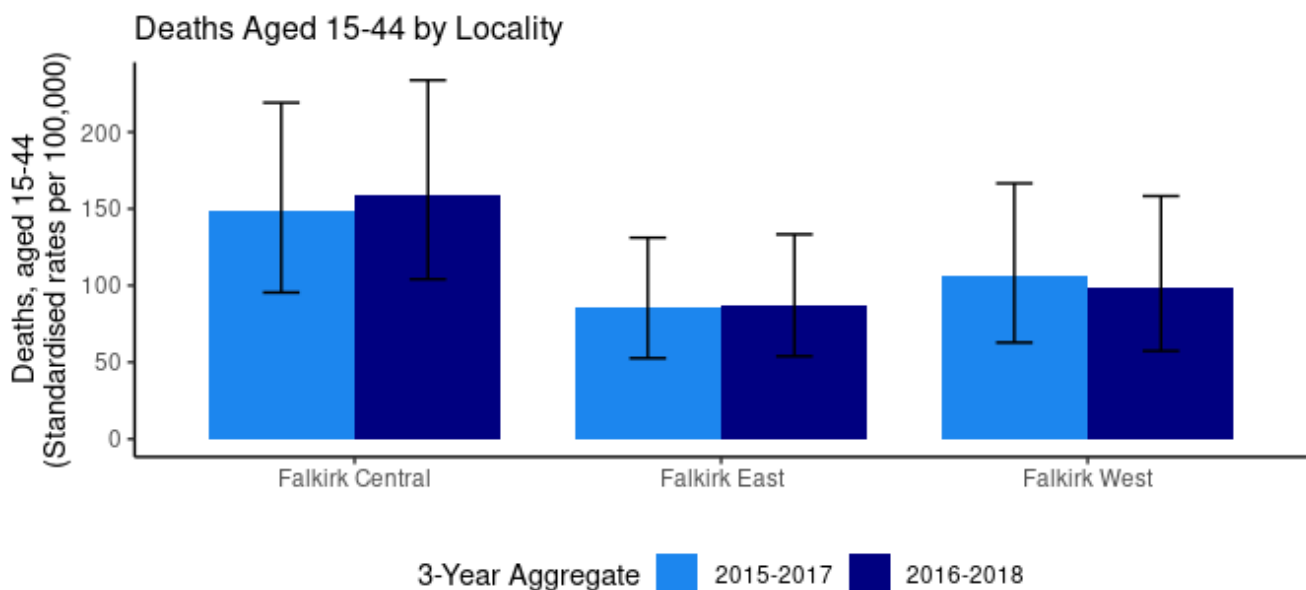

The following chart shows a trend of death rates among 15-44 year olds per 100,000 age-sex standardised population<sup>4</sup> by area (i.e. Early mortality rate per 100,000). In the most recent aggregate time period available (from 2016-2018), the mortality rate in Falkirk West locality was **99** deaths per 100,000 population. Figure 12 then provides comparisons of deaths for all localities in Falkirk HSCP, for the two latest time aggregates available.

**Figure 11: Deaths aged 15-44 years by geographical area and over time.**

Source: ScotPHO

**Figure 12: Deaths at ages 15-44 in Falkirk HSCP localities.**

Source: ScotPHO

## Long-Term Physical Health Conditions and Multimorbidity

In the financial year 2018/19, in Falkirk West Locality, **18%** of the total population had at least one physical long-term condition (LTC). These include: cardiovascular, neurodegenerative, and respiratory conditions, as well as other organ conditions (namely liver disease and renal failure), arthritis, cancer, diabetes, and epilepsy. *Please see footnotes for information and caveats on identifying LTCs.*<sup>5</sup>

The co-occurrence of two or more conditions, known as multimorbidity, is broken down in figure 13, distinguishing between age groups. Note that this chart *excludes* the population in the locality who do not have any physical long-term conditions. Figure 13 therefore shows that among the people who have a LTC, **21%** of those under the age of 65 have more than one, compared to **52%** of those aged over 65.

**Figure 13: Numbers of physical long-term conditions by age group in 2018/19.**

Source: Source Linkage Files

### Most common physical Long-Term Conditions (LTCs)

Below is a breakdown of the physical LTCs, for the financial year 2018/19. Table 6 illustrates the top 5 physical LTCs across all ages at locality, partnership, and Scotland level.

**Table 6: Prevalence of the five most common physical LTCs as a percentage of the population across geographical areas (where 1 = most prevalent).**

Top 5 Physical Long-Term Conditions

<i>Falkirk West Locality</i>		<i>Falkirk HSCP</i>		<i>Scotland</i>	
1	Arthritis 4.7%	1	Arthritis 4.9%	1	Arthritis 5.5%
2	Cancer 4.6%	2	Coronary heart disease 4.8%	2	Cancer 5%
3	Coronary heart disease 4.4%	3	Cancer 4.8%	3	Coronary heart disease 4.8%
4	Asthma 3.3%	4	Asthma 3.5%	4	Asthma 4.5%
5	Diabetes 2.8%	5	Diabetes 3%	5	Diabetes 3.1%

### Cancer Registrations

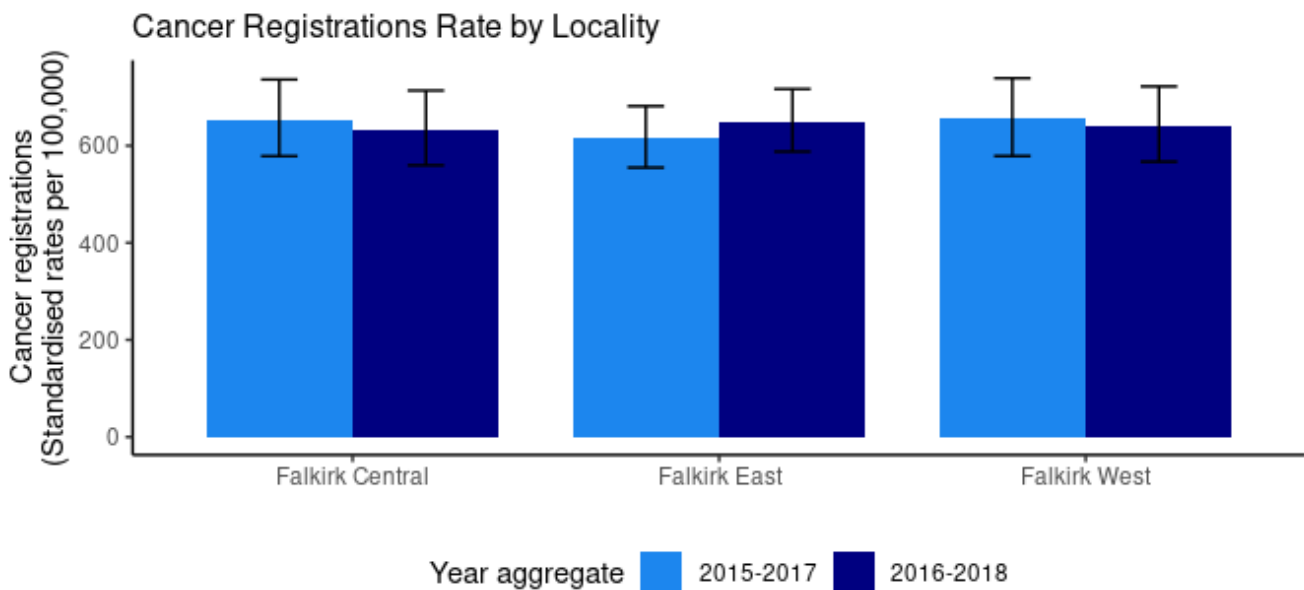

For the period 2016-2018, there were 285 new cancer registrations per year on average (**641** registrations per 100,000 age-sex standardised population) in Falkirk West locality. This is a **2.2%** decrease in cancer registrations rate from the previous aggregate period 2015-2017. Figure 14 shows changes over time since 2011-2013, and Figure 15 compares the rates of localities in Falkirk HSCP for the two latest available time periods.

Figure 14: Cancer registration rate over time and by geographical area.

Source: ScotPHO

Figure 15: Cancer registration rates in Falkirk HSCP localities.

## Lifestyle and Risk Factors

### Summary:

Mental and physical wellbeing has close ties with people's lifestyles and behaviours. Financial security, employment and location are influences that often have a bearing on these choices. Issues can develop when alcohol, smoking or drug use shape lives. This section provides data on drug-related hospital admissions, alcohol-related hospital admissions, alcohol-specific mortalities and bowel screening uptake, to give an overview of some of the lifestyles and behaviours for Falkirk West locality. These can give an idea of quality of life and prosperity.

#### For the most recent time periods available<sup>3</sup>, Falkirk West had:

- **103** drug-related hospital admissions per 100,000 age-sex standardised population<sup>4</sup>. This is a lower rate of admissions than for Scotland (181).
- **381** alcohol-related hospital admissions per 100,000 age-sex standardised population<sup>4</sup>.
- **15** alcohol-specific mortalities per 100,000 age-sex standardised population<sup>4</sup>.
- a **61%** uptake of bowel cancer screening for the eligible population.

### Drug-related Hospital Admissions

There were 103 drug-related hospital admissions per 100,000 age-sex standardised population<sup>4</sup> in Falkirk West locality for the most recent time period available (3 year financial year aggregate for 2015/16 - 2017/18).

This is a 115% increase since 2011/12 - 2013/14 (3 financial year aggregates).

A trend of the change in drug-related hospital admissions for Falkirk West locality compared with Scotland, Falkirk HSCP and NHS Forth Valley is shown in the chart below from 2011/12 - 2013/14 onwards.

**Figure 18: Trend of Drug-related Hospital Admission Rates by geographical area.**

Source: ScotPHO

A comparison of areas at the most recent time period (2015/16 - 2017/18 aggregated financial years) is available below. This shows Falkirk West locality has a lower rate of admissions (103) than Falkirk Partnership (144), and a lower rate of admissions than Scotland (181) overall.

**Figure 19: Comparison of Drug-related Hospital Admission Rates for the period 2015/16 - 2017/18.**

Source: ScotPHO

## Alcohol-related Hospital Admissions

The 2018/19 alcohol-related admissions rate is 381 per 100,000 age-sex standardised population<sup>4</sup>, which is a 8.4% increase overall since 2011/12.

The chart below shows a trend of alcohol-related hospital admissions for Falkirk West locality compared with Scotland, Falkirk Partnership and NHS Forth Valley from financial year 2011/12 to 2018/19.

**Figure 20: Trend of Alcohol-related Hospital Admission Rates by geographical area.**

Source: ScotPHO

Comparison across different areas for 2018/19 is shown in Figure 21. This shows that Falkirk West locality had a lower alcohol-related hospital admissions rate (381) compared to Scotland (669).

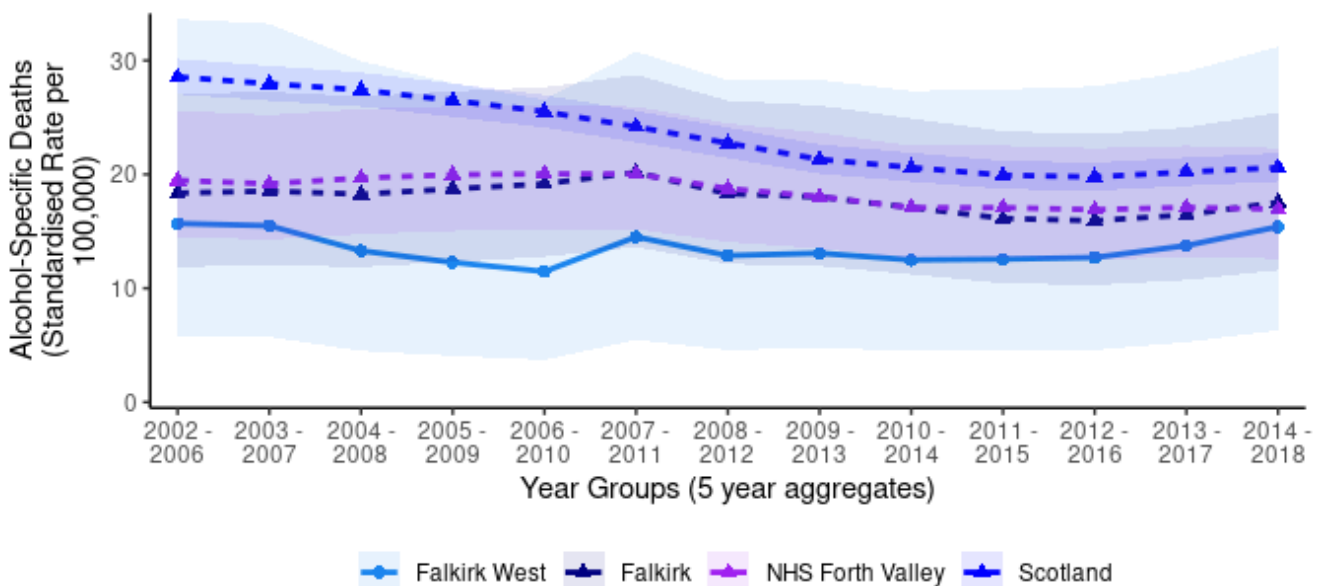

**Figure 21: Comparison of Alcohol-related Hospital Admission Rates for 2018/19.**

Source: ScotPHO

### Alcohol-Specific Deaths

Data on alcohol-specific deaths is available as 5 year aggregates. The rate of alcohol-specific deaths is currently higher in Falkirk West than the rate in 2009 - 2013 (18% change).

**Figure 22: Trend of Alcohol-Specific Death Rates by geographical area.**

Source: ScotPHO

A comparison across different areas illustrates that Falkirk West locality has a lower alcohol-specific death rate compared to Scotland as a whole.

**Figure 23: Comparison of Alcohol-related Death Rates for the period 2014 - 2018 (5 year aggregate).**

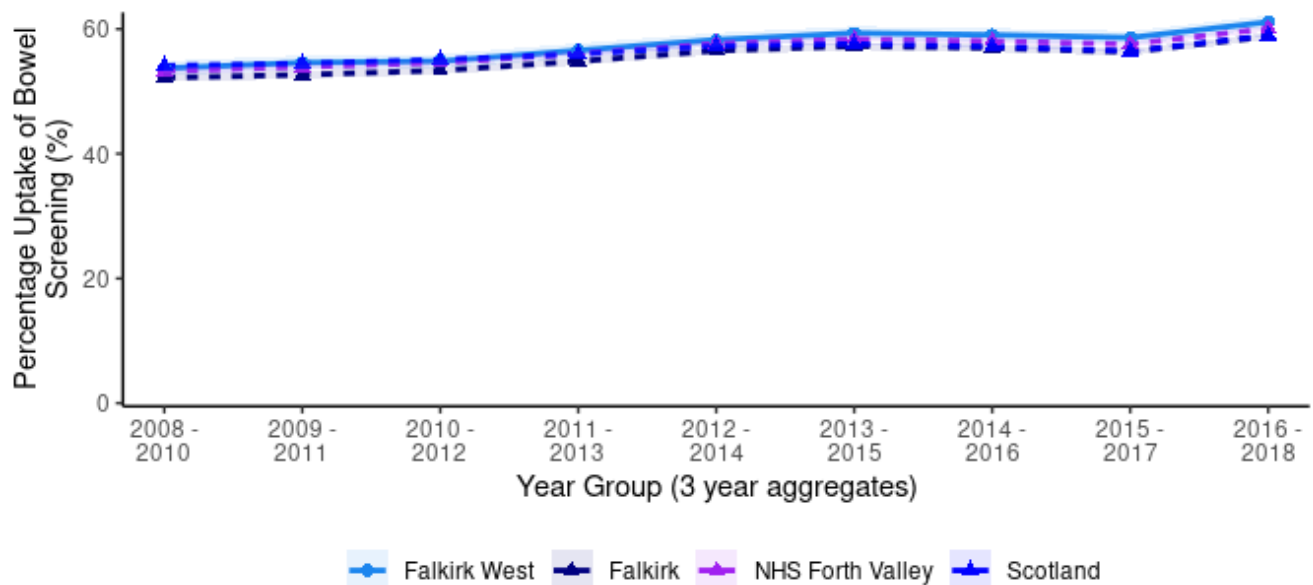

Source: ScotPHO

## Bowel Screening Uptake

Bowel screening is offered every two years to eligible men and women aged between 50-74 years old. Eligible people are posted a test kit which is completed at home. Since 1st April 2013, those aged 75 and over can also self-refer and opt into screening.

A trend of the percentage uptake of bowel screening among the eligible population is shown below for Falkirk West locality compared with Scotland, Falkirk HSCP and NHS Forth Valley. Data is suppressed into 3 year aggregates. The 2016 - 2018 uptake rate for Falkirk West is **61%**.

**Figure 24: Trend of Bowel Screening Uptake for eligible men and women, by geographical area.**

Source: ScotPHO

Compared with Scotland, Falkirk West locality has a higher percentage uptake of bowel cancer screening for the period 2016 - 2018.

**Figure 25: Comparison of Bowel Screening Uptake for 2016 - 2018.**

Source: ScotPHO

## Hospital and Community Care

This section includes acute hospital data, delayed discharge bed days and A&E attendances.

**For the most recent time periods available, Falkirk West had:**

- **9,760** emergency hospital admissions per 100,000 population.
- **66,913** unscheduled acute specialty bed days per 100,000 population.
- **26,505** A&E attendances per 100,000 population.
- **15,290** delayed discharge bed days per 100,000 population.
- **633** emergency hospital admissions from falls per 100,000 population.
- **111** emergency readmissions (28 day) per 1,000 discharges.
- **1,385** potentially preventable hospital admissions per 100,000 population.
- People on average spent **87%** of their last 6 months of life in a community setting.

## Hospital Care (Mental Health Specialty)

This section looks at hospital admissions to mental health specialties.

**For the most recent time periods available, Falkirk West had:**

- **329** emergency mental health specialty admissions per 100,000.
- **49,242** unscheduled mental health specialty bed days per 100,000.

### Unscheduled Bed Days (MH)

**Figure 37: MH Unscheduled bed days by geographical area**

Source: PHS SMR04

## Footnotes

1. Population projections are not currently provided by NRS at the locality level. To explore how the population in Falkirk West is expected to change in the future, the percent changes in population projection to 2025 for Falkirk by age group and gender were calculated from the NRS Local Authority Population Projections. These percent changes were then applied to the Falkirk West 2018 mid-year population estimates (also split by age group and gender) to obtain population projection estimates for Falkirk West, based on the projections for the HSCP and the current population structure of the locality.
2. Care Home Data included in the Services Map and Table was sourced from the [Care Inspectorate](#). [GP Practice](#) data from April 2020, and [Hospital](#) and [A&E](#) data was sourced from Public Health Scotland Open Data. Only services that are within the physical boundary of the HSCP or Locality are included in the map and table, so there may be services outside Falkirk which people may use but are not shown.
3. The data used in General Health and Lifestyle & Risk factors sections (except for long-term conditions) of this locality profile are taken from [ScotPHO](#). There may be more recent data available for the indicators elsewhere.
4. Data taken from ScotPHO is often reported using the European Age-Sex Standardised Rate per 100,000. This allows for comparisons across different areas to be made. For more information on how these rates are calculated, please refer to [www.isdscotland.org/Products-and-Services/GPD-Support/Population/Standard-Populations/](http://www.isdscotland.org/Products-and-Services/GPD-Support/Population/Standard-Populations/)
5. Physical long-term conditions data comes from the Source Linkage Files, and the conditions are identified using ICD-9 and ICD-10 codes in the diagnosis fields. Please note that the Source Linkage Files data only contains information on people who have had contact with the NHS through either inpatient admissions, outpatient attendances, daycase attendances, A&E attendances or through prescribed items, the data does not show all service users in Scotland who have been diagnosed with an LTC as not all of these individuals will have used these services. Also note that LTC rates are based on an adjusted population indicator in the Source Linkage Files so that population sizes are closer to the official estimates.

## Appendices

### Appendix 1: Indicator Definitions

Indicator	Definition
<b>% last 6 months of Life Spent in a Community Setting</b>	The percentage of time spent by people in their last 6 months of life in the community. Community includes care home residents as well as those living in their own home. Considers all hospital activity (e.g. geriatric long stay (GLS), mental health, acute). Inpatient activity with a care home location code recorded in SMR is included within the Community percentage for all years presented. This activity represents beds funded by the NHS which are located within a care home.
<b>A&amp;E Attendances</b>	Attendance rates to A&E departments for patients by residence per 100,000 population. Includes all ages.
<b>Alcohol-related hospital admissions</b>	General acute inpatient and day case stays with diagnosis of alcohol misuse in any diagnostic position (ICD-10 code: E24.4, E51.2, F10, G31.2, G62.1, G72.1, I42.6, K29.2, K70, K85.2, K86.0, O35.4, P04.3, Q86.0, R78.0, T51.0, T51.1, T51.9, X45, X65, Y15, Y57.3, Y90, Y91, Z50.2, Z71.4, Z72.1). All rates have been standardised against the European standard population (ESP2013) and 2011-based population estimates.
<b>Alcohol-specific deaths</b>	Alcohol related deaths (based on new National Statistics definition): 5-year rolling average number and directly age-sex standardised rate per 100,000 population. (ICD-10 codes from the primary cause of death: E24.4, F10, G31.2, G62.1, G72.1, I42.6, K29.2, K70, K85.2, K86.0, Q86.0, R78.0, X45, X65, Y15).
<b>Bowel Screening Uptake</b>	Bowel screening uptake for all eligible men and women invited (aged 50-74): 3-year rolling average number percentage. Eligible men and women are posted a guaiac-based faecal occult blood test kit (FOBT) which should be completed at home. This involves collecting 2 samples from each of 3 separate bowel movements. The kit is returned in a pre paid envelope to the central screening centre in Dundee and tested for hidden traces of blood in the stool. Individuals who have a positive FOBT result are referred to their local hospital for assessment and, where appropriate, offered a colonoscopy as the first line of investigation.
<b>Cancer Registrations</b>	New cancer registrations: 3 year rolling average number and directly age-sex standardised rate per 100,000 population. All rates have been standardised against the European standard population (ESP2013) and 2011-base population estimates. ICD10: C00-C96 excluding C44 (principal diagnosis only).
<b>Death, aged 15-44</b>	Deaths from all causes (ages 15-44 years), 3 year rolling average number and directly age sex standardised rate per 100,000 population. All rates have been standardised against the European standard population (ESP2013). Deaths assigned to year based on death registration date.
<b>Delayed Discharge Bed days</b>	Number of days people aged over 18 spend in hospital when they are ready to be discharged per 100,000 population. Locality has been derived from the person's postcode of residence. Note that this may not

	always reflect the council area responsible for the person's post hospital discharge planning. The HSCP total is based on the area responsible for the person's post hospital discharge planning, which reflects what is published nationally.
<b>Drug-related hospital admissions</b>	General acute inpatient and day case stays with diagnosis of drug misuse in any diagnostic position (ICD10: F11-F16, F18, F19, T40.0-T40.9), 3-year rolling average number and directly age-sex standardised rate per 100,000 population. All rates have been standardised against the European standard population (ESP2013) and 2011-based population estimates.
<b>Emergency Admissions</b>	Rate of emergency (non-elective) admissions of patients of all ages per 100,000 population. This has been separated into two indicators – one for acute specialty and one for mental health specialty stays. An emergency admission is defined as being a new continuous spell of care in hospital where the patient was admitted as an emergency. The total number of emergency admissions is then calculated by counting the number of continuous spells in hospital within a financial year. (See also the "Hospital Care in Mental Health Specialities" definition).
<b>Emergency Admissions from a Fall</b>	Rate of acute emergency admissions (non-elective) of patients of all ages where a fall was logged as an ICD-10 code. ICD-10 codes W00-W19 were searched for in all diagnostic positions, in conjunction with the admission type codes 33 (Patient injury, home accident), 34 (Patient injury, incident at work) and 35 (Patient injury, other).
<b>Emergency Readmissions (28 day)</b>	The rate of readmissions of all adults (18+) within 28 days of an emergency admission per 1,000 discharges.
<b>Hospital Care in Mental Health Specialities</b>	Mental health admission data is taken from SMR04, which holds records on patients receiving inpatient care in mental health (psychiatric) facilities. Episodes beginning with a transfer have also been included in these figures, as well as emergency admissions as many of these episodes will have started as unplanned acute admission. Therefore the initial unscheduled admission need not have been to a mental health long stay speciality.
<b>Life expectancy, females</b>	Estimated female life expectancy at birth in years, multi-year average (over 3 years for NHS Boards and Local Authorities, 5 years for Intermediate zones). Mortality data are based on year of registration. They also include non-Scottish residence so the number of deaths match those produced by NRS.
<b>Life Expectancy, males</b>	Estimated male life expectancy at birth in years, multi-year average (over 3 years for NHS Boards and Local Authorities, 5 years for Intermediate zones) Mortality data are based on year of registration. They also include non-Scottish residence so the number of deaths match those produced by NRS.
<b>Physical Long-Term Conditions</b>	Health conditions that last a year or longer, impact a person's life, and may require ongoing care and support. The LTCs presented are: Arthritis, Atrial Fibrillation, Cancer, Coronary Heart Disease, Chronic Obstructive Pulmonary Disease (COPD), Cerebrovascular Disease, Dementia, Diabetes, Epilepsy, Heart Failure, Liver Failure, Multiple Sclerosis, Parkinson's, and Renal Failure.
<b>Population prescribed drugs for anxiety/depression/psyc</b>	Estimated number and percentage of population being prescribed drugs for anxiety, depression or psychosis.

hosis	
<b>Potentially Preventable Admissions (PPA)</b>	Emergency admissions (non-elective) of patients of all ages for conditions based on 19 “ambulatory care sensitive conditions” from “The health of the people of NEW South Wales - Report of the Chief Medical Officer”. These conditions result from medical problems that may be avoidable with the application of public health measures and/or timely and effective treatment usually delivered in the community by the primary care team. Please see complete list of ICD-10 codes included in Appendix 3.
<b>Unscheduled Bed days</b>	Rate of unscheduled bed days of patients of all ages per 100,000 population. Takes the bed days spent only within the year of measurement – stays that overlap financial years will have their respective days counted either side. This has been separated into two indicators – one for acute speciality and one for mental health specialty stays.

## Appendix 2: Date of Indicator Data Extractions

Section	Indicator	Date of data extraction
Demographics	Population structure	2019-10-24
Demographics	Population projection	2020-06-30
Demographics	SIMD2016	2019-05-09
Demographics	SIMD2020	2020-06-26
Households	Household estimates	2020-07-08
Households	Household in each council tax band	2020-07-08
Services	GP Practice locations	2020-07-24
Services	Care Home locations	2020-05-31
Services	A&E locations	2020-07-06
General Health	Life expectancy males	2020-07-24
General Health	Life expectancy females	2020-07-24
General Health	Deaths ages 15-44 years	2020-07-24
General Health	LTC multimorbidity	2020-07-23
General Health	New cancer registrations	2020-07-24
General Health	% and number of people with a prescription for anxiety, depression or psychosis	2020-08-13
Lifestyle & Risk Factors	Drug-related hospital admissions	2020-08-13
Lifestyle & Risk Factors	Alcohol-related hospital admissions	2020-07-24
Lifestyle & Risk Factors	Alcohol-specific mortality	2020-08-13
Lifestyle & Risk Factors	Bowel screening uptake	2020-07-24
Hospital and Community Care	Emergency Admissions (Acute)	2020-07-14
Hospital and Community Care	Unscheduled bed days (Acute)	2020-07-14
Hospital and Community Care	A&E Attendances	2020-07-15
Hospital and Community Care	Delayed discharge bed days	2020-08-04
Hospital and Community Care	Fall emergency admissions	2020-08-26
Hospital and Community Care	Emergency Readmissions (28 day)	2020-08-26
Hospital and Community Care	% last 6 months in community setting	2020-08-20
Hospital and Community	Potentially Preventable Admissions (PPAs)	2020-08-20

Care		
Hospital Care (Mental Health Specialty)	Emergency Admissions	2020-08-20
Hospital Care (Mental Health Specialty)	Unscheduled bed days	2020-07-14

### Appendix 3: Conditions included as Potentially Preventable Admissions (PPAs)

Condition	ICD10 codes included	Comments
Ear Nose And Throat	H66, J028, J029, J038, J039, J06, J321	NA
Dental	K02, K03, K04, K05, K06, K08	NA
Convulsions And Epilepsy	G40, G41, R56, O15	NA
Gangrene	R02	NA
Nutritional Deficiencies	E40, E41, E43, E550, E643, M833	NA
Dehydration And Gastroenteritis	E86, K522, K528, K529	NA
Pyelonephritis	N10, N11, N12	NA
Perforated Bleeding Ulcer	K250, K251, K252, K254, K255, K256, K260, K261, K262, K264, K265, K266, K270, K271, K272, K274, K275, K276, K280, K281, K282, K284, K285, K286	Excludes episodes with following main OPCS4 codes: S06, S57, S68, S70, W90, X11
Cellulitis	L03, L04, L080, L088, L089, L980	NA
Pelvic Inflammatory Disease	N70, N73	NA
Influenza And Pneumonia	J10, J11, J13, J181	NA
Other Vaccine Preventable	A35, A36, A370, A379, A80, B05, B06, B161, B169, B26	NA
Iron Deficiency	D501, D508, D509	NA
Asthma	J45, J46	NA
Diabetes Complications	E100, E101, E102, E103, E104, E105, E106, E107, E108, E110, E111, E112, E113, E114, E115, E116, E117, E118, E120, E121, E122, E123, E124, E125, E126, E127, E128, E130, E131, E132, E133, E134, E135, E136, E137, E138, E140, E141, E142, E143, E144, E145, E146, E147, E148	NA
Hypertension	I10, I119	Exclude episodes with following main OPCS4 codes: K01 - K50, K56, K60 - K61
Angina	I20	Exclude episodes with main OPCS4 codes: K40, K45 K49, K60, K65, K66
COPD	J20, J41, J42, J43, J44, J47	J20 only included if secondary diagnosis has one of J41 - J44,

		J47
Congestive Heart Failure	I110, I50, J81	Exclude episodes with following main OPCS4 codes: K01 - K50, K56, K60 - K61
